99 VADERS TI BASIC from NOT POLYOPTICS

A fast action arcade type game in TI BASIC.

ATTENTION! The world has been taken over (this may have escaped your notice) . UFO's are now overhead. From a huge mother ship smaller craft are attacking.
Your country needs YOU!

From the outer chutes on the ship fall deadly vessels full of Terry Wogan clones. If these land, they destroy you with heavily amplified joviality - you must destroy them before they land! From the inner chutes come robot craft controlled by small rainbow toned computers. You should shoot these down before they land - if too many splatter on the ground, you are drowned in rubberised keys.

Seriously....Program Operation:

Use keys S & D to move your ship left and right.
Use key G to fire.

You have three cannon. Do not let the outer ships land! Destroy the inner ships if you can, if too many splatter, your cannon is destroyed. Also, make sure they do not splatter too close to you, or the wreckage will destroy you.

When you have destroyed sufficient attacking craft, the Mother ship will leave. Try to shoot the central exhaust tube for extra points.

Then another wave of aliens will attack you. Each successive wave will be a little harder.
The initial high score is 5000. If you beat it,you can put your name up there. For each name position the letter A will appear. Change the letter using the E & X keys and press ENTER when the correct letter is shown. (Space is available too).

After the game has ended, press the ENTER key to start again.

PS For a temporary respite press key 1 (number one)
Press S D or G to continue.

Central cover design by
Marie Partakis

Distributor: Stainless Software
